EDUCATION

- 2024**
 - **B.Tech – CGPA 7.74**
Raj Kumar Goel Institute of Technology, Ghaziabad (Aug 2024 – Present)
- 2021**
 - **Intermediate – 76.80%**
St. Fidelis College (Apr 2021 – Jun 2023)

SKILLS

Technical

Language : Go, C++, C

Framework : Gin, REST APIs

Database : MongoDB

Tools : Git, GitHub, Postman, VS Code

Other : JWT Authentication, Data Structures, Algorithms, OOP, System Design Basics.

Personal

Self-Learner, Creative Thinking, Communication, Leadership, Team Work, Problem solving.

ADDITIONAL EXPERIENCE

- 2025**
 - **Smart India Hackathon**
College Level Participant
 - Collaborated with a team to design and present an innovative software solution.
 - Contributed to backend architecture and API design.
- 2026**
 - **HackNovate 7.0**
ABESIT College – Hackathon
 - Secured 5th Position among participating teams in a competitive hackathon.
 - Built a full-stack prototype within 24 hours under team constraints.

PERSONAL PROJECTS

- **MediVault**
 - Developed MediVault, a healthcare management platform with dedicated doctor and patient portals for secure medical data management.
 - Built a centralized repository for storing patient records, prescriptions, medication history, and diagnostic reports with role-based access control.
 - Integrated AI-powered report analysis and medicine assistance features to help users better understand medical reports and prescribed medications.
 - Implemented QR-code based emergency access, enabling quick retrieval of critical patient information during medical emergencies.

Tech : React Native, Expo, Node.js, Express, MongoDB, TypeScript.

- **Splitwise**
 - Developed a full-stack expense-sharing platform inspired by SplitWise.
 - Implemented secure user authentication, login, and password recovery workflows using OTP-based verification for enhanced account security.
 - Designed RESTful APIs for user management, group creation, expense tracking, and transaction processing across multiple groups.
 - Built flexible expense-splitting functionality, allowing users to selectively include participants in an expense instead of splitting costs among all group members.
 - Developed an optimized settlement algorithm to aggregate balances across multiple groups and minimize the total number of transactions required for debt settlement.
 - Implemented real-time balance calculations to provide users with accurate information on amounts owed and receivable within shared expense groups.

Tech : Go, Gin, MongoDB, JWT, REST APIs.

ACHIEVEMENTS

- > Secured **5th Position** at ABESIT HackNovate 7.0 Hackathon.
- > Selected participant at **Smart India Hackathon** – College Level.
- > Consistent problem solver on **LeetCode**.
